Benjamin Lemin

Senior Web Developer – PHP, Symfony, Drupal | Programming
Coach
Hélécine, Walloon Region, Belgium

Summary

Senior PHP Developer & Web Consultant with 15+ years of experience working on Symfony, Drupal and complex web platforms. I specialize in understanding and evolving existing applications — especially when systems have grown over time and require careful, pragmatic improvements rather than full rewrites. Throughout my career, I've worked across multiple industries including media, finance, retail, transport and agriculture, contributing to production systems where stability, maintainability and real business needs matter. My work focuses on:- understanding complex codebases- solving production issues- implementing new features safely- improving code clarity and maintainability over time I'm used to collaborating closely with developers, product teams and stakeholders to deliver practical solutions that move projects forward. I'm currently available for freelance missions (part-time), and open to new opportunities immediately.

Experience

Freelance

Programming Coach

January 2022 - Present (4 years 5 months)

Home - Remote

Since 2022, I've been offering one-on-one coaching in web development, mostly for students and people switching careers.

My approach is fully personalized: I adapt to each person's level and goals to make technical concepts more accessible and concrete.

I usually focus on backend logic, especially with PHP, Symfony, or Drupal, and I also help structure projects, clarify architectural choices, or debug tricky issues.

I put a strong emphasis on pedagogy, active listening, and building confidence. This activity runs in parallel with my work as a senior developer, and I aim to develop it further in the coming months.

Contraste Digital

Web Consultant

November 2019 - October 2025 (6 years)

Braine-l'Alleud, Brabant-Wallon, Wallonia, Belgium

For nearly six years, I worked as a backend web consultant for Contraste Digital, handling various missions for clients in media (Groupe Rossel) and retail (Stanhome FR & IT).

I contributed to platform redesigns, developed new features, maintained existing systems, and integrated third-party services.

Each project was unique — some short-term, others longer — and helped broaden my technical and functional expertise.

Main stack: PHP (Drupal 7/8/10), MariaDB, Go, Docker, microservices, CI/CD.

I worked within agile teams, often in direct contact with business teams and project managers.

BluBird nv/sa

Consultant

April 2018 - July 2019 (1 year 4 months)

Brussels Area, Belgium

Main mission – Delcampe.net (April 2018 – March 2019)

I joined a 10-person dev team working in a structured agile (Scrum) environment to maintain and refactor Delcampe.net, a high-traffic e-commerce platform for collectors.

My responsibilities included fixing bugs, implementing new features, and participating in code reviews.

The stack included Symfony 3, MariaDB, GitLab CI/CD, PHPUnit, and Jasmine.

I also became more aware of performance challenges and the importance of close collaboration with the customer support team.

Secondary mission – Keytrade Bank (April – July 2019)

Short-term maintenance mission on the bank's internal platforms (public site, intranet, extranet), using a custom PHP stack without any framework, SVN for version control, and strict internal deployment procedures.

I had to quickly adapt to a highly regulated banking context and learned how to communicate clearly with various internal teams.

Stack used: PHP, Symfony 3, MariaDB, GitLab, PHPUnit, Jasmine, Gulp, SVN, custom development

Isobar Belgium

Web Developer

July 2017 - February 2018 (8 months)

Auderghem

As a web developer at Isobar Belgium, I worked on the maintenance and evolution of several existing websites for well-known brands such as Jupiler, Leffe, and Honda.

The team was small (4 people), and we handled a high volume of short projects with tight deadlines.

I worked on various PHP-based architectures: CMS platforms (WordPress, Drupal), frameworks (Zend 1.12, Laravel 5), and from-scratch custom builds.

ADNEOM

Consultant PHP / Symfony

July 2016 - June 2017 (1 year)

Bruxelles, Luxembourg

Mission 1 – Flash Global (July – September 2016)

Part of a small team working on a proof-of-concept for Easy4Pro, a logistics platform for on-demand transport.

My job was to refactor and improve an existing codebase, introduce best practices, and help stabilize the project for a potential go-live.

Mission 2 – IPM Group (November 2016 – June 2017)

As a PHP developer at IPM Group (publisher of Logic-Immo), I was responsible for developing a REST API using Symfony 3 for their new web platform.

We used Docker for development and the Atlassian suite (Bitbucket, Jira, Confluence, Bamboo) for versioning, CI, and project tracking.

I contributed to technical design, endpoint development, testing, and CI integration.

Stack used: Symfony 3, PHP, Docker, REST APIs, Git, Atlassian (Bitbucket, Jira, Bamboo, Confluence)

F2C - Financial Communication Consult

PHP Developer

January 2015 - August 2015 (8 months)

Esch-sur-Alzette

As a PHP developer at F2C, I worked on maintaining Publifund, a platform designed to collect, structure, and publish financial data for investment funds.

My work focused on three core modules: automated PDF generation (KIID), the internal ticketing system, and a web crawler for verifying published data using regular expressions.

This was my first experience working with large-scale databases (MySQL, MongoDB) and in a highly structured, performance-driven environment.

Sogesa S.A.

Web Développeur PHP

November 2011 - December 2014 (3 years 2 months)

Floriffoux

This first job was a deep dive into fullstack development. I joined Sogesa, an agricultural land management consultancy, to build a custom ERP system from scratch.

Alone at first, then in a two-person team, I handled the full development cycle: requirements analysis, frontend and backend development, hosting (via an external provider), maintenance, and feature updates.

This is where I learned PHP, Symfony, Git, and deployment workflows — and the application is still in use today.

Stack used: PHP, Symfony 2.8, HTML/CSS, JavaScript, MySQL, Git

Centre de Biophysique Moléculaire Numérique (CBMN)

Perl Developer (student - work for graduates)

February 2010 - May 2010 (4 months)

Agro-Biotheque in Gembloux

As part of my final-year project, I joined the CBMN to contribute to RAIDGBS, a public health project supported by the Walloon Region.

My goal was to develop a Perl script (triggered via Bash) to create and populate a MySQL database with structured biological data.

I taught myself Perl independently and discovered a completely new context involving bacterial protein markers.

It was a valuable learning experience at the intersection of computing, biology, and scientific rigor.

Stack used: Perl, Bash, MySQL

Education

Haute Ecole de la Province de Liège 'Rennequin Sualem'

System Programming, Industrial Programming · (2007 - 2010)

Technofutur TIC

Web App Developer, Information Technology · (2016 - 2016)

Collège Saint-Barthélemy

CESS, Strong Sciences & strong Mathematics · (2001 - 2007)
